EDUCATION

LEIC-A
Instituto Superior Técnico
Expected 2028

// profile

Aspiring Software Engineer currently in my 2nd year of Computer Science at Instituto Superior Técnico (LEIC-A). Focused on learning clean code, algorithms, and building practical projects close to the metal — from digital logic to assembly. Looking for an internship or junior role where I can contribute and learn fast.

// projects

16-bit Single-Cycle Processor

Academic

Computer Architecture coursework — Instituto Superior Técnico

Designed a 16-bit single-cycle processor in Logisim, supporting a small custom instruction set (li, add, dot, dota) built on a 3-bit opcode scheme.

Logisim · Digital Logic · ISA Design

Mini-Transformer in RISC-V

Academic

Assembly / Machine Learning coursework — Instituto Superior Técnico

Implemented the core building blocks of a Mini-Transformer directly in RISC-V assembly, run on the Ripes simulator — tokenization, attention scoring, and matrix multiplication from scratch.

RISC-V · Assembly · Ripes

// education

LEIC-A — Computer Science and Engineering

2024 — 2028 (exp.)

Instituto Superior Técnico, Lisbon

Coursework spans computer architecture, algorithms, systems programming, and mathematics.

// experience

No professional experience listed yet — add internships, part-time work, or volunteering here as you gain them.
